

# Elland Edging

## 5 reasons why you should choose British Recycled Plastic

**Extremely durable, strong and vandal proof, eliminating maintenance for lower whole life costs**

**Ultra low carbon footprint as made from recycled and recyclable waste**

**No need for paint or other harmful preservatives**

**Does not splinter, rot, crack or fade and is totally impervious to water, algae and insects**

**Can be worked just like wood**

## 100% British Recycled Plastic Elland Edging

Exclusively available from our EBAY shop, Elland edging made from recycled plastic is the perfect answer for creating edges and shapes for any lawn or garden border.

Both flexible and robust, Elland edging helps to prevent grass from growing into flower beds shrubberies and paths, at the same time providing stability and strength for edges.

This heavy duty system is manufactured in the Britain from 100% British recycled plastic and provides a strimmer resistant, weather proof boundaries for all landscaping projects. With the flexibility to create curves and corners as well as straight edges, the system is robust enough to withstand small tractor traffic and general mower activity.

## 100% Recycled and 100% Recyclable

**Elland Edging** is processed using open loop recycling, converting an existing plastic product into the manufactured rolls. The product is manufactured from recycled plastic waste which can in turn be recycled. Any waste generated in the manufacturing process or installation is re-used and reprocessed saving valuable resource and reducing costs.

## Installation Guide

**For neat looking and maintenance-free appearance to both new and existing borders, please follow the installation guideline for Elland Edging given below.**

1. Mark out the shape of the edging using a garden hose or rope.
2. Use an edging spade to cut the lawn to the shape of your flower bed. Vertical cuts will give the correct angle for lawn edging.
3. Dig a trench on the flower bed side of the line 25mm (1 inch) deeper than the edging.
4. Unroll the Elland edging and slide it into the trench **with the outside of the curl facing the flower bed.**
5. Position the Elland edging against the cut edge of the grass so that the top is just below the base level of the grass.
6. Use the soil to hold the edging in place as you work in sections along the length of the flower bed.
7. Compact the back-filled soil using your foot to hold the edging in place. The soil should come up to, but not above, the top of the edging.
8. Cut the Elland edging to length using a fine-toothed saw.
9. Right angled corners can be made easier by **lightly** scoring the inside of the edging.
10. Pegs or stakes should not be necessary provided that the soil is firmed down, although every gardener will have their own preferences.
